

*In addition to our patented Smart Hub, we also provide the services below:*

### **Telecom Infrastructure**

We build telecom infrastructure with quality, professionalism, and durability, rejecting shortcuts and cheap fixes, because we believe that doing it right from the start is what ensures long-term performance and reliability.

### **Video Surveillance Installation & Integrations**

We implement thoughtfully designed video surveillance systems for commercial and multi-unit properties, integrated into the building's telecom backbone. Our systems support effective security and operational oversight while giving owners and managers control without unnecessary complexity or monitoring burdens.

### **Consulting**

We advise developers, owners, and contractors on telecom strategy, system design, and execution, grounded in hands-on installation experience across complex, multi-site projects. Our consulting prioritizes clarity, constructability, and long-term scalability, helping teams make informed decisions that hold up well beyond initial construction.

## *Revenue Generating Telecom Solutions for Multi-Unit and Commercial Properties*

# The Novateck Telecom Smart Hub. The First of Its Kind.

The Novateck Telecom Smart Hub is a simple **yet foundational telecom** infrastructure solution designed to standardize how connectivity enters and is managed within a building. As the first universal telecom hub of its kind, it is protected by U.S. utility and design patents, reflecting a fundamentally new approach to telecom organization and access.

What sets this Hub apart isn't just its simplicity. **The Hub consolidates** multiple forms of connectivity—fiber, coaxial, Ethernet, and emerging ISP technologies, into a single, central interface. By creating a consistent, adaptable point of entry, it eliminates repeated reconstruction as service providers and technologies change over time.

Beyond functionality, the Hub brings order and clarity to telecom rooms by replacing ad hoc installations with a clean, intentional design. The result is a scalable, future-ready infrastructure that **supports long-term building operations across both residential and commercial properties.**

**The Novateck Telecom Smart Hub extends beyond basic internet access by introducing new flexibility** in how internet services are delivered and structured at a property level. By centralizing telecom connections and standardizing infrastructure, the Hub enables property owners to explore bulk service agreements or alternative commercial arrangements with participating ISPs, creating opportunities for recurring revenue while maintaining collaboration with service providers and tenant choice.
